Broccoli Raab

BR29-250 - A Foglia d'Ulivo Broccoli Raab

50 days. Brassica rapa. Open Pollinated. The plant produces good yields of dark green broccoli raab. Produces a large number of small tops that continuously re-sprout when cut. This plant produces abundant foliage similar to that of the olive tree and is grown for its tasty tender tops. The plants should be cut at the base before they have finished flowering. Their prized tender and bitter-tasting tops can be served as a side dish when boiled, stewed, or lightly fried. Excellent for stir fry and salads. Plant from early spring to late summer. An excellent choice for home gardens. A variety from Italy.

BR17-500 - Early Purple Sprouting Broccoli

60 days. Brassica oleracea. Open Pollinated. The plant produces very flavorful heads of purple broccoli. Once the main head has been removed this variety will continuously produce many offshoots during the season. Also can be used as sprouting broccoli. Broccoli turns green when cooked. Excellent color choice for garnishes or using fresh in salads. An extremely easy-to-grow hardy winter vegetable. Plant late winter/early spring. An excellent choice for home gardens. United States Department of Agriculture, G 32267.

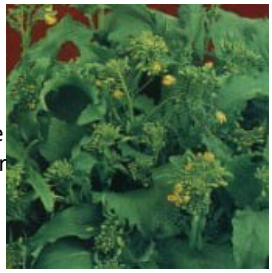
ES4 - Emergency Survival Seed Kit (20 Vegetables)

This Emergency Survival has 20 different vegetable varieties. The seeds are specially dried and sealed for long-term emergency survival seed storage. All seeds are open-pollinated heirloom varieties and 100% non-GMO. This kit should be a priority for any preparedness plan for national food shortages, war, or national disasters. The seeds selected are adaptable to short-season climates and do well in all regions of the country and are Easy-to-Grow for first-time gardeners. It includes planting instructions and a seed-saving guide. The kit includes Beets, Broccoli, Brussels Sprouts, Cabbage, Cauliflower, Celery, Cucumbers, Eggplants, Hot Peppers, Kohlrabi, Okra, Pumpkins, Radishes, Squash, Sweet Peppers, and Tomatoes. Buy and keep a supply of kits to provide for family security during times of uncertainty in the food supply chain. The kits are moisture-proof and come in a resealable bag.

BR21-500 - Sorrento Broccoli Raab

45 days. Brassica rapa. Open Pollinated. This early maturing variety produces good yields of large dark green broccoli raab. The head averages 3 to 4 inches in diameter. Harvest the tender leaves, the stems, and the unopened flower buds. They have a mild broccoli flavor and are excellent for stir fry and salads. Plant from early spring to late summer. This is one of the earliest broccoli raab to mature. Excellent choice for home gardens and market growers.

BR28-500 - Spring Rapini Broccoli



42 days. Brassica rapa. Open Pollinated. This early maturing plant produces good yields of large dark green broccoli raab. It has no central head but has side shoots. The leaves look like mustard leaves. Excellent for stir fry, fresh in salads, and boiled soups. Plant early in spring and harvest before hot weather, or late in fall. Excellent choice for home gardens.
