CN3-50 - Red Strawberry Corn

105 days. Zea mays. Plant produces good yields of sweet 6" long corn. Excellent popcorn variety. Great for school projects. United States Department of Agriculture, NSL 6831. pk/50

CN9-50 - Bloody Butcher Corn

120 days. Zea mays. Plant produces good yields of 12" long ears of red corn. These ears weigh approximately ½ pound. Can be eaten fresh when young as corn on the cob, or used to make flour and cornmeal. Withstands heavy winds, drought and heat. United States Department of Agriculture, PI 230320. A variety from West Virginia, USA. Plant Height: 14 ft tall. pk/50

CN36-50 - Ruby Queen Corn

F-1 Hybrid Variety

75 days. Zea mays. (F1) Plant produces good yields of 8" long ears of red corn. Yes, it's really red! This is an extra sweet, tender variety that is very flavorful! The ears have 16 to 18 rows of kernels. Best when picked when it is blush red for maximum sweetness. Or you can let it ripen to full red so it can develop its rich, old fashioned flavor. There is no need to isolate from other corns, but we suggest that you grow another SE variety to help with pollination. An added bonus the red tassels and stalks make fantastic autumn decorations. An SE variety. Plant Height: 7 ft tall. pk/50

(SE) Sugary Enhancer Hybrids The SE varieties have the highest sugar content. It also has superior tenderness. Usually last over a week in the fridge. No isolation needed.
