

# BD - Blossom Drop Resistant Sweet Peppers

## SP2-20 - Ace Pepper Seeds

70 Days. Capsicum annum. (F1) Ace Pepper. This early maturing plant produces heavy yields of red sweet bell peppers. Peppers turn from green to glossy red when mature, but can be used when green. The flesh is thick and sweet. Perfect for salads, frying, grilling, roasting, and stuffing. Gardeners can grow heavy crops, even for those who have had no success in growing sweet peppers in the past. Suitable for containers, patios, or small gardens where space is very limited! It does well in Northern regions and cool climates. Cold Tolerant. Always a great seller at Farmer's Markets! An excellent choice for home gardens and market growers. Disease Resistant: BD.
