

Cucumbers

CU134-20 - Bushy Cucumber Seeds

48 days. Cucumis sativus. (F1) Bushy Cucumber. This early maturing compact plant produces high yields of very flavorful 4 to 5" long green cucumbers. This is one of the better quality varieties for making crisp whole dill pickles. If you make your own pickles, you have to try this variety! It is also great in salads. This variety will take only 2 or 3 square feet as vines are only 5 ft long. Suitable for small gardens. A variety was brought into the USA from Russia in the early 1990s.
