

Kohlrabi

KO13-100 - Quickstar Kohlrabi

37 days. Brassica oleracea. (F1) This early maturing plant produces high yields of Kohlrabi. The skin is pale green and the flesh is creamy white. The bulbs are smooth, crisp, tender, and mild. The leaves are dark green and very flavorful. Best to harvest when bulbs are 2 to 3" across. Slow bolting. This is the earliest maturing variety on the market - only 37 days! Suitable for greenhouse production. An excellent choice for home gardens, greenhouses, market growers, and open field production.
