

Mustard

MU4-500 - Giant Red Mustard Seeds

40 days. Brassica juncea. Open Pollinated. Giant Red Mustard. This early maturing plant produces good yields of purplish red mustard leaves. The plant has large thick and tender leaves. They are very flavorful with a spicy taste. They have purple red leaves on the top and light green underneath. Used in salads or cooked. Great in salads, steamed or stir-fried. Makes fine pickled mustard greens. Slow to bolt. Color intensifies in cooler temperatures. Very winter hardy. An excellent choice for home gardens. A variety from Japan.
