## TM908-10 - Wild Galapagos Yellow Tomato

70 days. *Solanum cheesmaniae*. Open Pollinated. This early maturing plant produces high yields of very tiny  $\frac{1}{4}$  to  $\frac{1}{2}$  oz bright yellow cherry tomatoes. They are very sweet and flavorful. Perfect for salads, garnishes, or culinary creations. This tomato was discovered growing to within a few feet of the surf line, clinging to the black volcanic rocks of the Galapagos Islands. They are a favorite of the marine iguanas that bask there. Excellent choice for home gardens. Indeterminate.
